

Security Audit Certificate

A security audit for the *Grower Online Registration of Agriculture Input System (GRAINS)* APIs testing was conducted by Trinay Cyber Technologies Pvt. Ltd. between *Mar 5, 2024 to Mar 19, 2024* on the staging URL <https://tngis.tnega.org/grains/api/v1>

The details of the audit / auditee organization are as under:

1. Scope of Work : (GRAINS) APIs
2. Testing URL : <https://tngis.tnega.org/grains/api/v1>
3. Production URL : <https://grains.tn.gov.in/>
4. Test type : Grey box testing
5. MD5 hash value : c484016bfea758b42723e749f3566326
6. Audited By : Trinay Cyber Technologies Pvt. Ltd.
7. Audit Performed By : Lakshmi & Ramesh
8. Date of Issue : **Mar 19, 2024**
9. Date of Validity : **Mar 18, 2025 or until further modified (whichever is earlier)**
10. Unique Reference No. : TRINAY240319-05

CONCLUSION

No pending non-conformity remains in the audited API with regard to the security risks outlined by the Open Web Application Security Project (OWASP) as of Mar 19, 2024.

The API is safe for hosting if the provided recommendations are implemented. Therefore, it is our opinion that a typical user would require a sophisticated level of security attack skills to breach such a system. Any changes in the API and related infrastructure will void this certificate. In this capacity, we are pleased to provide a positive rating on the security posture of the given API.

RECOMMENDATIONS

1. The database user mentioned in the connection string of the application/web service should be provided with low-level privileges; the database user password should be in an encrypted format.
2. Any folder in which files are uploaded through the application/API should have read and write permissions only. No execute permissions should be given.
3. SSL should be enabled on the production server. HTTP only and secure flags should be enabled on all session IDs and cookies.
4. Weak security protocols and cipher suites should be disabled in the production environment.
5. Hardening of the web server/framework and the Operation System (OS) must be completed on the production servers.
